

IN THE SPECIFICATION

Please replace the paragraph beginning at page 6, line 15 with the following paragraph:

If the monoazo metals-compound is contaminated with some non-coordinating monoazo compound, the electrification stability of the charge control agent is decreased. ~~Therefore, the amount of non-coordinating monoazo compound is preferably 1 weight % at most. It is more preferably less than 0.5 weight % and further more preferably less than 0.1 weight %.~~
